

1971

The way we made the housing for our first emergency light was almost handmade, with a wooden mold and a homemade oven. But the real value was the technology hidden inside.

Sense of technology

ADN Normagrup

From the start we have investigated a great deal, developed prototypes and dared to put innovative solutions on the market, always guided by a sixth sense imprinted in our DNA: the sense of technology.

Everything we do corresponds to the five keys of the Normagrup DNA.

Innovation

Everything we do necessarily means to walk through an untried path. Imagining, creating and daring to walk through an untried path is the only way to create the future.

Safety

Our first development was an emergency light, and from that point onwards the focus on safety has been a constant within Normagrup.

Comfort

From the shade of the light to the coordination of a system, our developments have to make life more comfortable for everyone.

Control

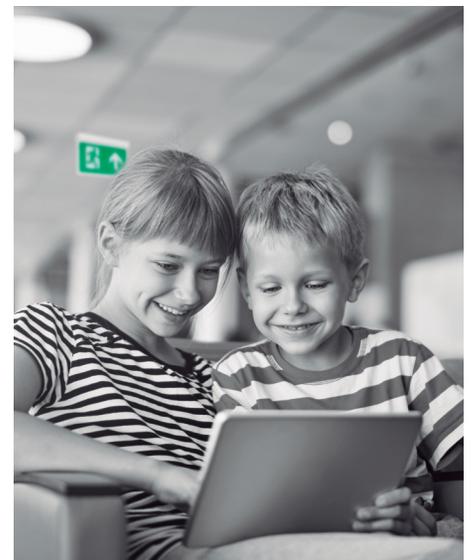

We see control as part of our products. We are developing solutions that enable the simple and intuitive control of the environment.

Design

Taking care of the aesthetics and the look of our products is not merely a frivolity. Through design, we can create pleasant environments and, isn't that important?

Quality

The customer is the absolute priority in our job, and the quality of our products and services is always focused towards the achievement of your maximum satisfaction.

Technology is our vehicle to make the world a better place.

Compromise between specialisation and diversification

Departaments

Divisions

In order to handle large projects and offer an excellent service, we had to grow. But to be specialists and flexible, we need to keep our dimensions small.

At Normagrup, we solved this by creating divisions that function as experts in their area. We also have common departments that work for everyone and give us cohesion.

NORCLINIC

www.normalux.com

www.normalux.com

Leading company in the manufacture, sale and distribution of emergency lighting in Spain. Our value has been proven by more than 40 years of experience, quality and confidence from our clients.

www.normalit.com

A division specialising in technical and architectural lighting which integrates all of the constructive process, incorporating the most innovative technology into products of a high technical quality.

www.normadet.com

State of the art solutions for fire and toxic gas protection systems. Certified quality.

www.norclinic.com

Specialists in the manufacture of hospital equipment which integrates night lights, indirect lighting and medical gas outlets.

Together, we make a perfectly coordinated team.

International presence

From Spain to the world

Normagrup researches, develops and manufactures in Spain.

We distribute technology and innovation around the world from our facilities in Asturias and through various branches.

We transform raw materials into technology.

Premises

In addition to all of our departments and production lines, we also have our own laboratories where we can test and experiment as frequently and comprehensively as we like to do.

Global commitment

We identify ourselves with the needs of each customer: we install, maintain, answer, resolve and we commit to ensuring that everything is working perfectly.

Finished product

Guaranteed product with full quality and confidence and 100% Normagrup.

100%

Entirely designed and manufactured in Spain

Automated lines

Our automated lines are constantly incorporating the most significant technological advances in the fields of electronics, robotics and automated control, thereby increasing the reliability of all of production.

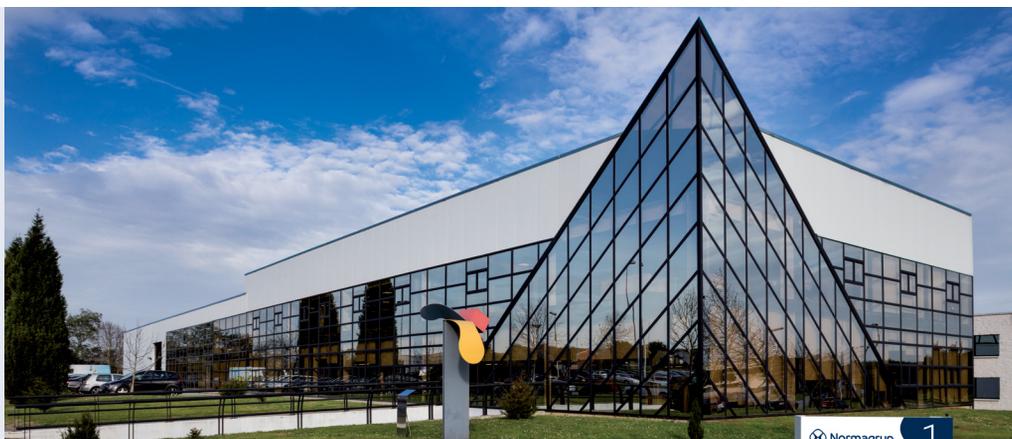

Our premises

Building 1

Normagrup Headquarters.
NormaLux warehouse.
Plastic injection.
Tooling.
Electronic assembly lines.
NormaLux product assembly lines.

Building 2

Aluminium injection.
Painting lines.

Building 3

Normalit/Norclinic warehouse.
Normalit/Norclinic assembly lines.

Space to research, experiment and learn

- 6000 sq.mt.
- Laboratories.
- R&D Department.
- Auditorium for 60 people.
- 1.000 sq.mt. of showroom.

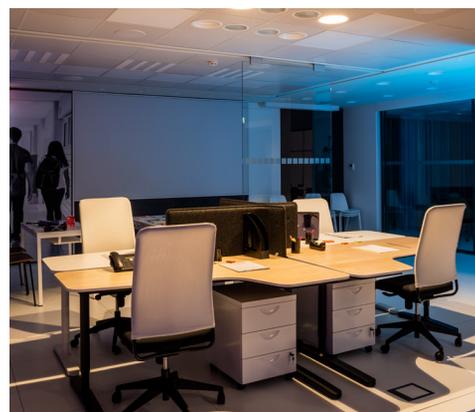

NTC

Normagrup Tech Center

Space to research, experiment and learn

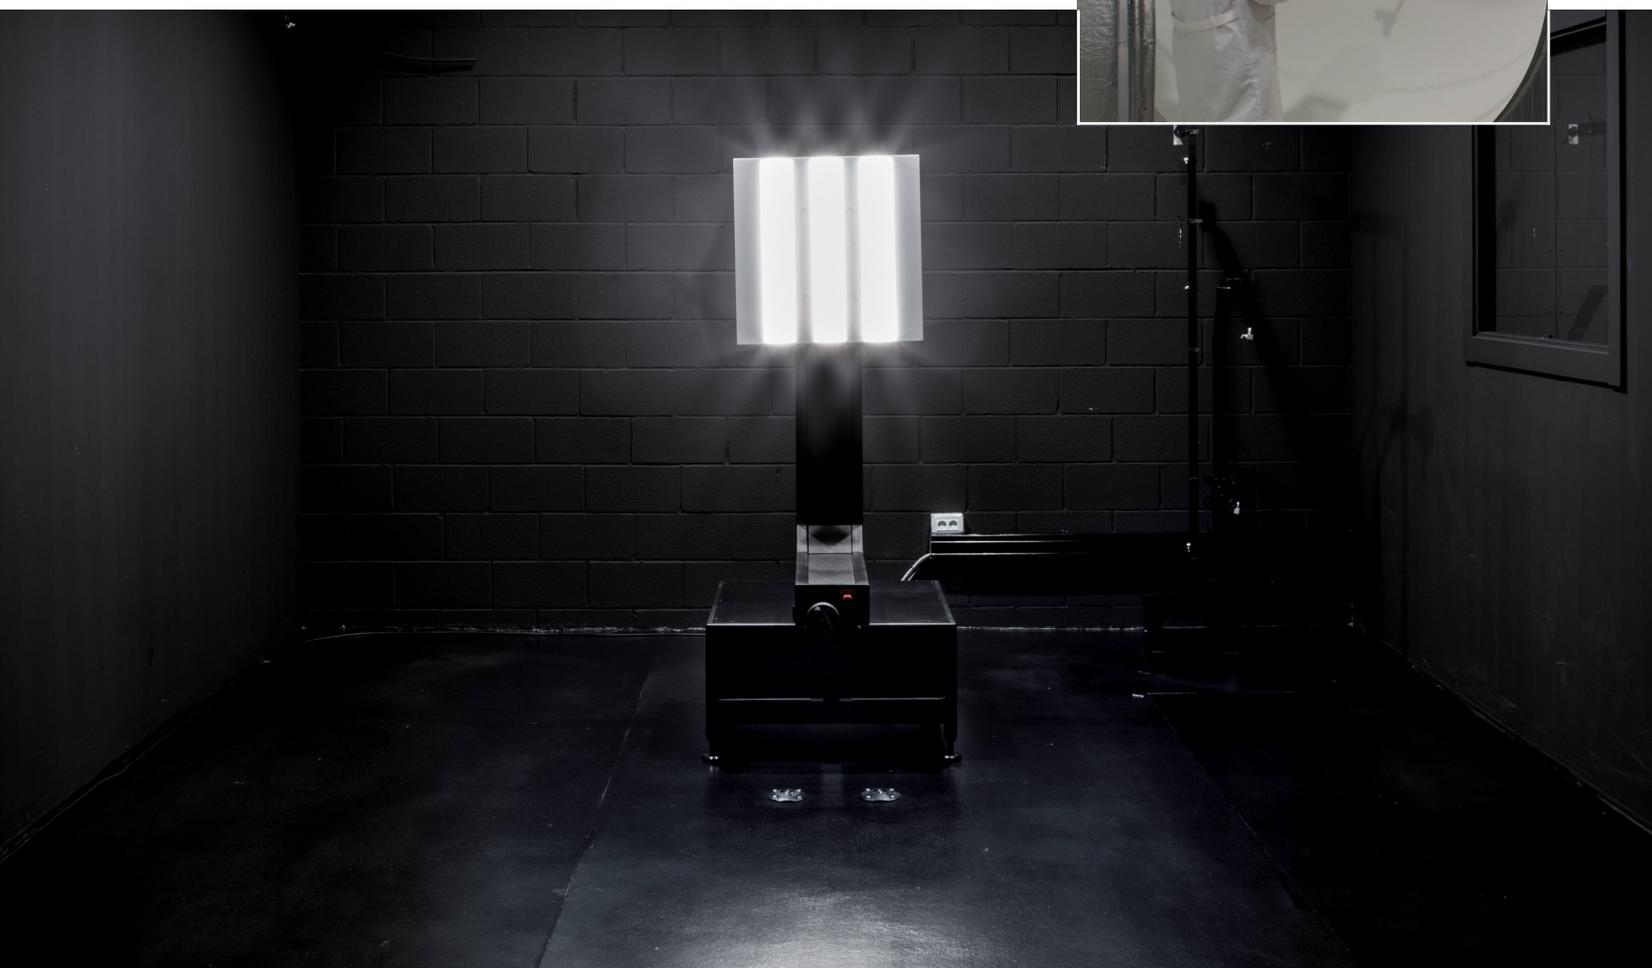

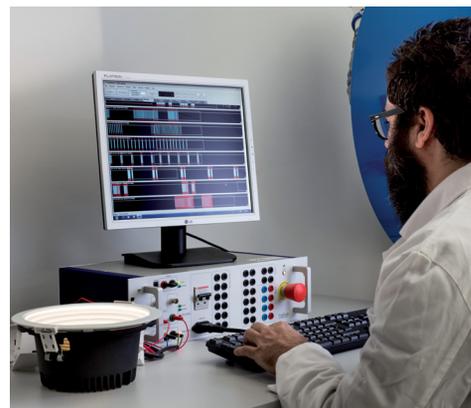

- Color temperature.
- Chromatic reproductions
- Technical lighting
- RGB.
- Tunable White.
- Adaptative Lighting.
- Lighting focused on health.
- NormaLink.

Our own laboratories

- [Goniophotometer](#) (light distribution).
- [Expectoradiometer](#) (chromatic coordinates of a light source, temperature of light, CRI,...).
- [Double monochromator](#) (photobiological risks).
- [Ulbricht sphere](#) (lumen output).
- [IP rating room](#) (from IPX1 to IPX8).
- [Dust tightness chamber](#).
- [Impact hammer](#) (from IK 1 to IK10).
- [Glow wire machine](#) (self-extinguishable properties of plastic parts).
- [DALI BUS tester](#).
- [Battery tester](#).
- [Smoke and heat tunnel](#).
- [3D printers](#).
- [Electromagnetic spectra analyzer](#).
- [Climatic chamber](#).
