

NORMALIT

Contelux

The CONTELUX system is an extraordinarily versatile structure that can hold a wide variety of luminaires installed on its metallic trays.

The CONTELUX structures can be fixed directly to the ceiling or be fitted with standard suspensions.

Specially useful when working with high ceiling, since the luminaires can be lowered to the desired height. This way we can use lower power fittings without giving up a comfortable lighting in this type of installations.

The trays can be blank or can incorporate luminaires, emergency lighting, speakers, electrical sockets, security systems etc.

It is very easy to install and allows an optimization in the maintenance labors.
